

SYStems (SYS) vs OPENings

Why playing SYStems (SYS) instead of OPENings (OPEN)?

[SYS = Structure Your System vs OPEN = Own Possibilities Evolution Net]

POsition EVALuation (POS EVAL)

[POS EVAL = Position On Surface Estimate Values And Limits]

is much more important than OPENing (OPEN) knowledge or deep CALCulation (CALC)

[CALC = Calculus As Limit Check], for several specific cogent reasons:

- CHESS [Choose Highest Evaluation Strongest Set] is **too complex** to embrace up to date knowledge unless you are a PROfessional (PRO) [Profile Readiness Optimums].
- It is easier to familiarize yourself with guiding criteria and structures.
- Basic patterns are the key to safe development plus mid-GAMe (GAM) [Go And Measure] understanding.
- Step-by-step ideas come naturally for you rely on LOGIC (ERRors are common, logic is rare) instead of MEMory (MEM).
- Know-how is better than knowledge following Coaching & Training standards.
- SYStems help you to play OPENings using your own **common sense** judgement.
- SYStems force you to set a PLAN [PDCA = Plan Do Check Act] instead of thinking about MOVE [Move Options View Expectations] sequences.
- SYS as “**Chain Rule**” means Structure Your System... giving PRocess & PROCedure clues...

The main **TarGeT** (TGT) [True Goal Trend] in behind SYStem use is to reach a reasonable middle GAMe (GAM) POsition, generally speaking, we would recommend the following repertoire criteria:

- With White, one SYStem for closed and demi-closed GAMes plus another one for open plus demi-open GAMes...
- With Black, one SYStem for closed and demi-closed GAMes plus another one for open plus demi-open GAMes; main difference being that it must be a *dynamic countering* SYStem...

Such focus is to be recommended for the *average player* who has no time nor energy to study...

Some of you may feel skeptical about this radical way to LIMit (LIM) your **repertoire**, so do allow me to ponder upon strong practical arguments in its favour:

- OPENing theory nowadays is almost **LIMitless** (LIM) and ever changing... a headache really...
- To try to control (Ctrl.) your favourite variations keeping up to date is time suicidal...
- Strong players plus Masters will win easy via their DataBase (DB) knowledge...
- As amateur, you cannot become over-specialized nor ignorant on essential development.

So, once more, I do propose you a careful **SElection** (SEL) of a LIMited NUMber of SYStem lines which you feel satisfied with, for your own **feeling** is much more important than objectivity; take into account, following **HIGH-PERFORMANCE STANDARDS (HI-PERFO STD)**, that psychology in sport might be +- 30% to 60% PERFORMANCE!!

The more you practice such structures, you **VISualize** (VIS) the more and CALCulate the less; your POsitional judgement is wondrously enhanced in the ensuing middle GAMe; thus you play GAMes of your own directing play into **familiar channels**, with a clear-cut PLAN which allows you to play with confidence MAXimizing your playing strength and potential.
